

Payments + Validations

How It Works

- Payment status is visible in garage detail before checkout
- Valet can refresh, collect payment, and launch validation tools in one area
- Validation redemption applies approved discounts with a clear audit trail
- Checkout verification confirms customer + vehicle before final closeout

Why This Reduces Friction

- Less back-and-forth between systems during peak pickup windows
- Fewer manual errors from re-keying amounts or validation values
- Faster line movement because operators act from a single workflow
- Clear payment state prevents accidental release before settlement

Why This Improves Billing Trust

- Consistent calculation and visibility of amount due
- Traceable validation activity by operator and timestamp
- Cleaner records for post-shift reconciliation and owner review
- Higher confidence for staff, managers, and accounting stakeholders
